Your AI history is becoming a profile

TODAY — one network, three labs, one profile

WITH LETHE — same labs, nothing to join, misuse still caught

WHY NOW · THE GAP

Consumers pay
Venice **>$70M ARR, $1B**
Jul 2026

+

Crypto unlinkability exists, unfunded
OpenAnonymity
Stanford · free

+

Labs approve anonymous tiers
Duck.ai
policy only

→

MISSING
anonymous *and* accountable, at commercial quality

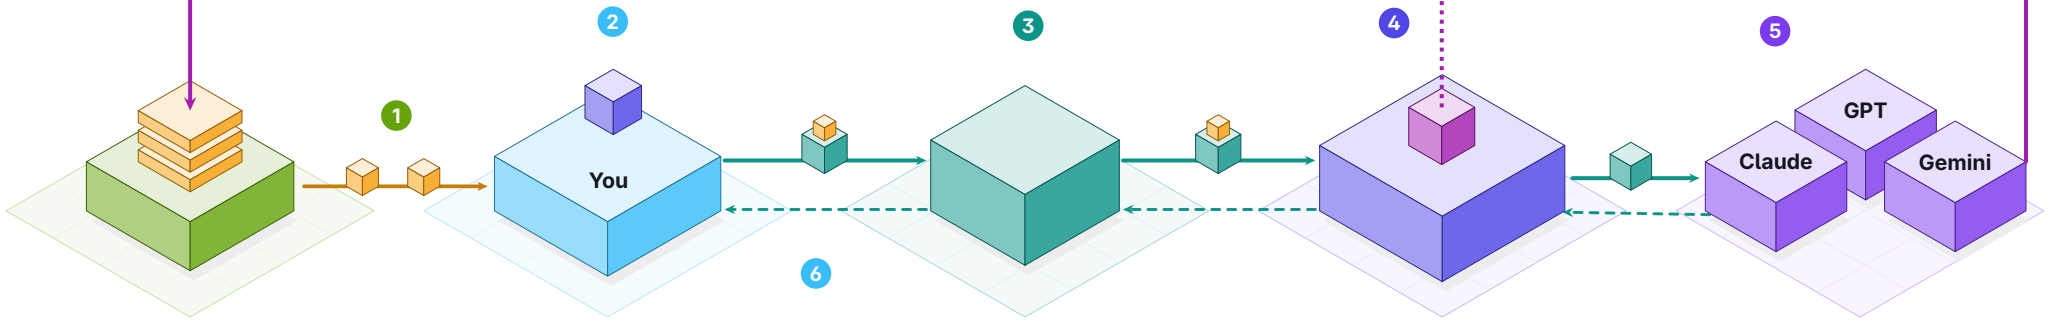

Sources: Lethe edge-network measurement (18 Sep 2026); OpenAI ads (Feb 2026); Anthropic retention terms (Jun 2026); Koi Security; Venice (TechCrunch, Jul 2026); OpenAnonymity (Stanford); Duck.ai.

No one can both identify you and read you

encrypted request · padded answer · credentials · accountability loop

THE ACCOUNTABILITY LOOP NEW labs get the misuse signal they require; nobody is identified

a lab flags misuse → b gateway maps it to an unlinkable member handle → c the member is never identified → d revoked only if 2 of 3 keyholders sign

ISSUER

1 Subscribe → receive N blind, rate-limited credentials

✓ SEES
that you paid

✗ NEVER SEES
any request · which credential you spend

YOUR DEVICE

2 App scores the prompt's risk, pads it, attaches one credential

6 Answer returns padded; memory stays on your device

✓ SEES
everything

✗ NEVER SENDS
account · card · address

INDEPENDENT RELAY

3 Forwards the encrypted request

✓ SEES
your IP only

✗ NEVER SEES
the request · its destination provider

LETHE GATEWAY

4 Verifies the credential · monitors misuse under Lethe's keys · forwards under Lethe's lab contract

✓ SEES
the prompt · a valid credential

✗ NEVER SEES
who you are

No identity logs · attested
anyone can verify

FRONTIER LABS

5 Answer at full capability

✓ SEE
the prompt

✗ NEVER SEE
account · card · IP · your other providers

BUILT ON STANDARDS **Privacy Pass** RFC 9576–9578 · **ARC rate-limited credentials** IETF draft · **Oblivious HTTP** RFC 9458 · **Attested confidential VMs** Intel TDX / AMD SEV-SNP

Standards: IETF Privacy Pass (RFC 9576–9578); ARC (IETF draft); Oblivious HTTP (RFC 9458); Intel TDX and AMD SEV-SNP attestation.

How Lethe makes money, and what the seed buys

A Revenue engine

four lines, in the order they switch on

NOW · THE APP

1 Lethe Plus — $18/mo

WHO PAYS individuals and prosumers
COMPARABLE **Venice Pro $18** · >$70M ARR
Duck.ai Pro $19.99

2 Lethe Pro — $40/mo

INCLUDES higher caps · top models

NEXT · THE LAYER

3 Lethe Layer

per-request fee + platform fee

WHO PAYS apps that already pool users
FOR privacy search · browsers
VPNs · health apps
EVIDENCE Kagi's Privacy Pass covers search only
Flo Health bought an OHTTP "Anonymous Mode"

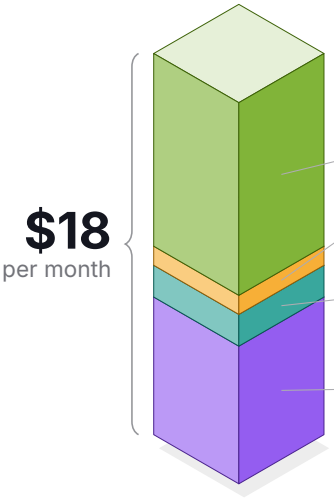

LATER

4 Firm access — ~$25k/yr

WHAT provider-blind, firm-audited
PRICED like a gateway · category median

B Unit economics

Lethe Plus at $18 / month, per subscriber

gross margin ~50%

payments

relay + attested gateway + monitoring

inference, capped by credentials

PLAN ASSUMPTIONS to validate in beta

rate-limited credentials double as cost control

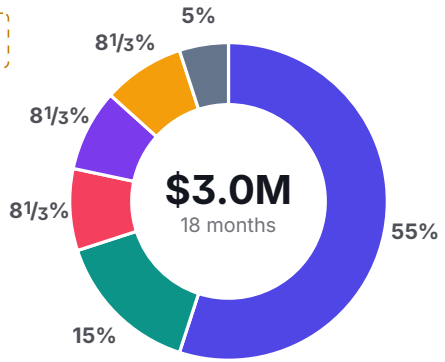

WHAT THE SEED BUYS · 18 MONTHS

seed closes

- **M3** protocol built + external security audit
- **M6** public launch · live anonymity-set counter
- **M9** first lab agreement on anonymous-tier terms
- **M12** first licensing customer
- **M18** **~4,600 paying subscribers ≈ $1M ARR**
  anonymity set ≥ 10,000 → **Series A**

C Where the funding goes

$3.0M seed · 18 months (plan)

BIGGEST LINE
a team of 6
3 founders + 3 engineers

EVERY LINE
retires a named risk

RUNWAY
18 months

$1.65M	55%	**Team** · 6 people (3 founders + 3 engineers) → retires: **execution**
$0.45M	15%	**Inference float** + confidential infrastructure → retires: **consumer unit economics**
$0.25M	8 1/3%	**Security** · external protocol audit + bug bounty → retires: **"can we trust it?"**
$0.25M	8 1/3%	**Legal** · lab agreements, 3 patent filings, freedom-to-operate opinion → retires: **lab approval and IP risk**
$0.25M	8 1/3%	**Go-to-market** · launch, public benchmark, privacy communities → retires: **building the crowd**
$0.15M	5%	**SOC 2 Type I + reserve** → retires: **licensing-customer due diligence**
$3.00M		**Total · 100%**

Plan figures are assumptions, not forecasts. Comparables: Venice (TechCrunch, Jul 2026), Duck.ai pricing, category ACV (Vendr).
